

XtraProtect AntiMicrobial Protection

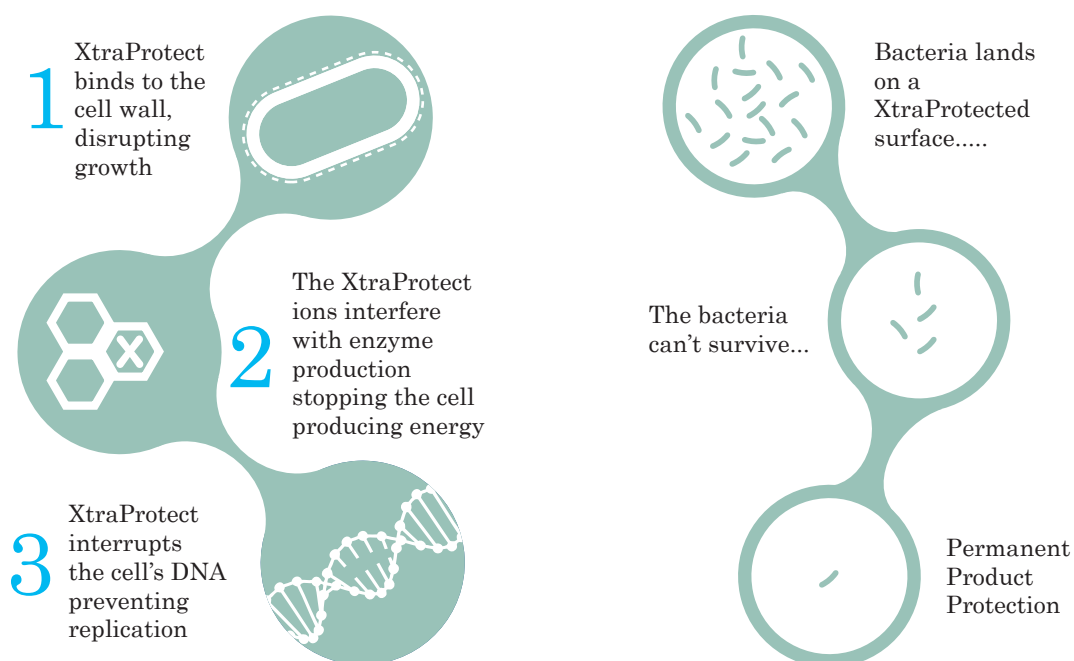

The Right Thing To Do to Support Hygiene Control in Retail Spaces and Public Places

XtraProtect Antimicrobial Protection is incorporated into the final coating applied to our products at the time of printing, it then provides continuous antimicrobial surface protection.

XtraProtect also protects the print from scratching and is available in gloss, matt and silk finishes.

How does it work?

When bacteria come into contact with a XtraProtected surface, the silver ions prevent them from growing, producing energy or replicating, therefore they die.

Produced in a manufacturing facility with the below certification.
