AntiMicrobial Protection

The Right Thing To Do to Support Hygiene Control in Retail Spaces and Public Places

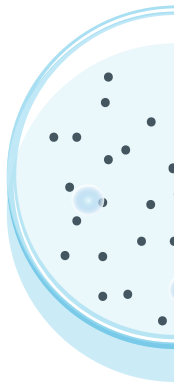

XtraProtect uses silver ion technology to provide Antimicrobial Protection and is incorporated into the final coating applied to our products at the time of printing. This then provides continuous antimicrobial surface protection. XtraProtect also protects the print from scratching and is available in gloss, matt and silk finishes.

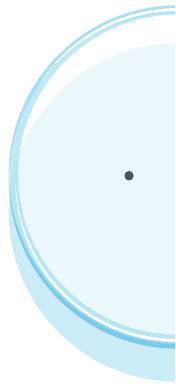

How does it work?

1 Bacteria comes in to contact with an XtraProtected Surface

2 The silver ions prevent them from growing, producing energy or replicating

3 Therefore the bacteria cannot survive on the protected surface

Give your products a strong start – XtraProtect them

Produced in a manufacturing facility with the below certification.
